SpanSet Incorporated is part of the international SpanSet Group which has manufacturing sites and licensees worldwide.

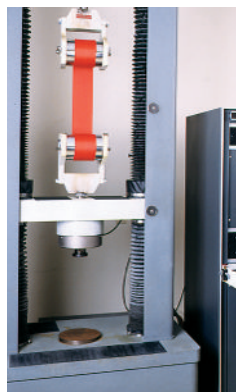

As a recognized industry leader, SpanSet has directed its business with the understanding that success is guided by customer satisfaction. If we are to grow and prosper we fully understand that we must continue to offer good quality merchandise, dependable service, qualified technical support, and competitive pricing. SpanSet, Inc. is committed to these principals.

With over 30 years of experience and acquired know-how in manufacturing and in solving load securement problems, SpanSet is being specified as the preferred supplier in a wide variety of applications. In addition to standard stocking catalog items, SpanSet offers specialized and custom designed products to meet specific requirements. Further details are available on request from our sales office.

SpanSet's policy of continuous commitment to development may require the product range to be modified. We therefore, reserve the right to make changes to the products and specifications in this catalog without prior notice.

Quality Control

From incoming raw materials and component parts to final assembly, SpanSet products are subjected to strict ANSI/ASQC and ISO 9001:2000 standards for quality control and assurance. Metal parts are manufactured from high quality steels and alloys with equally rigid standards for plated, epoxy coated or painted finishes.

SpanSet, Inc. is an ANSI/ASQC and ISO 9001:2008 registered company. This certification attests that its quality system meets internationally accepted standards for quality assurance in its management and manufacturing practices. All SpanSet webbing meets the requirements of OSHA and are manufactured in accordance with ASME B30.9 and WSTDA industry standards.

Weaving

The webbing used in SpanSet's textile products is manufactured in-house on state-of-the-art high speed weaving looms. Yarns of either nylon or polyester are of the highest quality for greater strength, durability, and controlled elasticity.

Quality and Service. Our Commitment to You.

Sewing

Electronically controlled sewing machines ensure the highest standards of quality, consistency, and reliability of the load bearing seams on the heavy duty tiedowns, utility rated tiedowns, and flat web slings. Rigorous manufacturing and sewing standards are maintained for the forming of eyes and the attachment of ratchet buckles, hooks, and other components.

Finishing

The loom state greige webbing is carefully dyed and thermo-fixed giving greater abrasion resistance, protection from deterioration from the sun's ultraviolet rays, and reduced elongation. An optional PVC coating offers exceptional resistance to abrasion and cutting in the aggressive environments to which the products will be subjected. The finished webbing is rolled in specific lengths or boxed in bulk.

Medium and Light Duty Ratchets

tension gently, secure efficiently

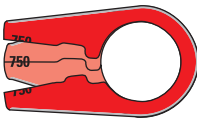

For securing heavy loads in day to day business, you not only need cargo control that you can rely on, you also need a solution that makes your work easier.

Longer handle, tensioning that protects your back

The extended handle of the Ergo ratchet makes lashing much easier. You can achieve even high pre-tensioning forces using much less muscle power. Ergo ratchets pull downwards instead of pushing upwards making them much easier on your back.

With the extra long lever, you'll be able to bring safety demands to an even higher level.

Tension Force Indicator

With the patented TFI, you can verify the pre-tension force in the system quickly and easily. When the jaws of the TFI are closed, it indicates the maximum pre-tensioning force that can be achieved of 750daN. Intermediate stages can also be read off. It just can't get any easier. And now there is also a TFI with an adapter for the adjustable end.

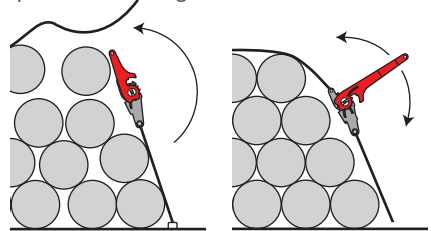

Our tension force indicator helps prevent over tensioning and ensures the correct tension is applied every time it is used. Contact our customer service department about adding your tension force indicator today!

Optional integrated edge protection

Straps by SpanSet are available with a low elasticity of max 4%. Thanks to the additional wear resistant selvage, selvage, they won't wear away. Even on rough loads, meaning you have a tough partner on your side to achieve load security.

"Anti-Belt-Slip" procedure

The ratchet is opened, the tension loosens sporadically, and the load gets out of control: Anyone who has experienced this knows how important ABS is. It means you have complete control even during release. The ABS system allows you to release the pre-tension force in small steps. This gives you the opportunity to use a fork-lift truck to straighten up any loads that threaten to tip and are leaning into the strap, helping to prevent damage and accidents.

Safety label on every strap

So that you can always check whether the ratchet strap is suitable for the load to be secured; each strap is equipped with a label that describes safe WLL. The strap may not be used without this label. Our tension ratchets combine the greatest security with economy and efficiency. These ratchets make your everyday life easier and help you work faster which equals more profitability... What more could you want?

Ratchet Strap Assemblies

2" ABS™ Controlled Release Ratchet Tiedown System

with #1860 ABS™ Ratchet (Pat. nos. 5,103,536 & 5,205,020)

LoadGard™ Blue Standard Treated Webbing

SpanSet's ABS Controlled Release Ratchet Tiedown System gives the operator total control of the load both during load securement and release.

- Double latch ratchet system allows much higher pre-tension to be applied during initial load securement, allowing a fine adjustment for greater pre-tension.
- Dual control release system allows release of the pre-tension step by step, one "notch" at a time, to ensure stability of the load prior to final release.
- The patented ABS SpanSet Ratchet Tiedown System features a distinguishing blue epoxy finish for surface protection and a double locking mechanism for load transport security.

Trailer Winches

SpanSet Heavy Duty Trailer Winches are designed for rugged use, making SpanSet winches excellent choices for the heavy-duty transportation industry.

Winches/Heavy Duty Trailer

Weld-On Webbing Winches Fixed Position, Permanently Mounted

8110

- Standard weld-on fixed bottom mount winch
- Fully slotted mandrel
- Designed for use with 3" and 4" webbing
- Holds approx. 30 ft. of webbing

Portable Webbing Winches Flexible Mounting on Side Channel

8120

- Standard portable mount winch using 2 set screws
- Fully slotted mandrel
- Designed for use with 3" and 4" webbing
- Holds approx. 30 ft. of webbing

Caution: Do not over tighten bolts. This will bend the bracket and may cause the winch to fail.

Spool Type/Weld-On Webbing Winches Fixed Mount

8212

- Fully slotted mandrel
- Designed for use with 2" webbing
- Holds approx. 40 ft. of webbing
- Side plates for webbing protection

For 3" webbing order part # 8213

Sliding Webbing Winches Slider Track or Fixed Mount

8150

- Low Profile notched frame winch
- Fully slotted mandrel
- May be used as weld-on
- Holds approx. 20 ft. of webbing when used as slider

8214

- Fully slotted mandrel
- Designed for use with 4" webbing
- Holds approx. 40 ft. of webbing
- Side plates for webbing protection

8250

- High Profile notched frame winch
- Fully slotted mandrel
- Holds approx. 30 ft. of webbing

May also be used as deep storable weld-on (part # 8210 – no notches)

Warning!

When using a winch bar an extension (cheater) bar must not be used, severe injury can occur.

Winch Accessories

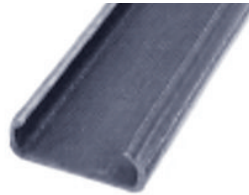

Web Strap Winder

6231

- Steel with zinc plating
- 2" - 4" strap
- Easily dismantled

Weld-On Slider Winch Track

6112

- Standard 6 ft. length
- Heavy gauge steel
- Use with part #s 8150 and 8250 sliding winches

Winch Bars

6341

- Winch adjusting bar with offset tip and knurled non-slip handle
- Length 33"
- Black painted

6351

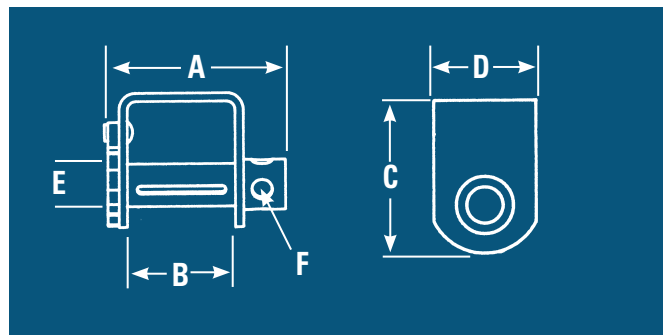

- Winch adjusting bar with offset tip and knurled non-slip handle
- Length 33"
- Chrome type finish

6361

- Winch adjusting bar with offset tip and knurled non-slip handle
- Chrome type finish
- Modified handle for tightening chain binders

Cargo Bars

SpanLoc™ Cargo Bar – Heavy Duty Steel

- Universal – fits both 96" and 102" trailers
- Made from heat treated construction grade steel
- Scuff resistant – high traction feet
- Easy to operate thumb latch and handle
- Easy maintenance – feet, rack, and housing use nuts, bolts, and set screws for quick parts replacement
- Universal Steel Cargo Bar, Part#CB89104S

*Also available in aluminum: Part # CB89104

SpanLoc™ Jack-Style Cargo Bars

Square Heavy Duty

- Adjustable from 86" to 109"
- Heavy duty steel tubing
- Scuff and slip resistant rubber feet
- Jack-style handle permits quick placement
- Square/Heavy Duty style, Part #14101

Logistics Track – Series E

HET-10

- 10 ft. Horizontal

Note: High strength 12 gauge steel.
Strength: 50,000 lbs. min. yield

VET-10

- 10 ft. Vertical

Note: High strength 11 gauge steel.
Strength: 50,000 lbs. min. yield

Decking/Shoring Beams

- Fits "E" and "A" Logistics Tracks
- Made from heat treated construction grade aluminum
- 2,000 lbs. capacity as decking support*
- 2,000 lbs. capacity as shoring support*
- All steel end channels with wide adjustment range
- Available in adjustment lengths of 92" to 103"

Fits	Part #	Replacement	Part#
96" Trailer	DS8495	Attaching Pin	AP1
		Decking Beam Repair Kit	DBRK
96" & 102" Trailers	DS92103	Attaching Pin	AP1
		Decking Beam Repair Kit	DBRK

*Working Load Capacities based on evenly distributed loads.

Wood Beam Socket

WBS1

- Heavy duty
- Designed for use with 2" x 4" or 2" x 6" lumber
- Spring loaded clip fits both "E" and "A" Series Logistic Track

Note: Working Load Capacities in different grades of lumber vary widely.

Black EPDM Rubber Tarp Straps

Description	Length	Part#
All rubber tarp straps come assembled with S-hooks attached. Straps are designed to hold tarps securely in place, not to hold loads in place. Packaged 50 per box.	9"	RTS09
	15"	RTS15
	21"	RTS21
	31"	RTS31
	41"	RTS41

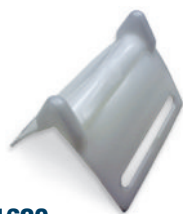

Warning! Extreme caution must be taken when using rubber tarp straps. Wear safety goggles while stretching or disconnecting. Stretching beyond 1/2 of the original length can cause strap to break, resulting in serious injury.

Corner Protectors

Corner protectors are designed to protect cargo and straps. Rubber protectors conform to the load. Plastic protectors have a protective corner recess and are molded to 90°.

- 1" Ratchet Buckle Assemblies
- 1 3/8" Ratchet Buckle Assemblies
- 2" Ratchet Buckle Assemblies
- 1" Cam Buckle Assemblies

Utility Tiedowns

Utility rated tiedowns are designed for farm, automotive, utility, marine, light truck and industrial uses. SpanSet offers a wide variety of webbing, end fittings and tensioning devices that cover most any requirement. All SpanSet Utility Rated Tiedown Straps are packaged for individual counter sales with the UPC label.

J-Hooks – designed for greatest strength. Capable of grabbing bars up to 1" in diameter.

J-Hook and Keeper Rings – allow use of the hook only or with keeper ring, will fit most any size object you wish to use as an anchor point. Most versatile end fitting.

S-Hooks – vinyl coated to protect finished surfaces such as: motorcycles, snowmobiles, and have a large radius to hook onto handlebars.

Forged Snap Hook – forged steel with safety latch.

Flat Snap Hook – flat stamped steel with safety latch.

Endless – No Fitting.

Tow Straps

Tow Straps — Polyester

SpanSet Tow Straps are made of the finest quality polyester webbing. The webbing is designed to stretch, allowing a “shock absorbing” action which reduces shock loads that could damage vehicles or equipment. A special chemical treatment prevents mildew, dry-rot, and resists abrasion. Wear protection standard on both eyes.

All Load Securing and Tow/Recovery Straps are Not the Same

Most anyone with a sewing machine can fabricate these products but that doesn't mean they are manufactured to industry standards and are safe to use. You must be sure these products have been properly designed, tested, rated and tagged. Your safe use of these products and the safety of others depend on it.

It is the owner's/user's responsibility to evaluate the suitability of any product in this catalog for their particular application. All products shown in this catalog are to be used for their intended use only. None of the products shown are to be used in a lifting application.

SpanSet Heavy Duty Tie Down products meet or exceed the requirements of the Web Sling and Tie Down Association (WSTDA) recommended Standard Specification for Synthetic Web Tie Downs WSTDA-T1.

Removal from service

A Tie Down should be removed from service if any of the following are visible:

- Holes, tears, cuts, snags or embedded particles in the webbing
- Broken or worn stitching in load bearing stitch patterns
- Excessive abrasive wear on the webbing
- Knots in any part of the webbing
- Distortion, excessive pitting, corrosion or damage of any fitting or component.
- Melting, charring or weld spatter on any part of the webbing
- Chemical burns
- Any condition which causes doubt as to the strength of the Tie Down

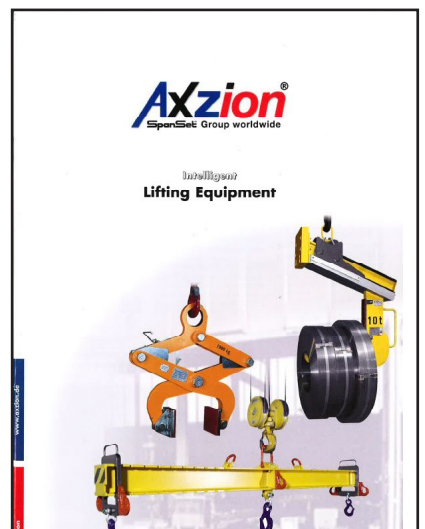

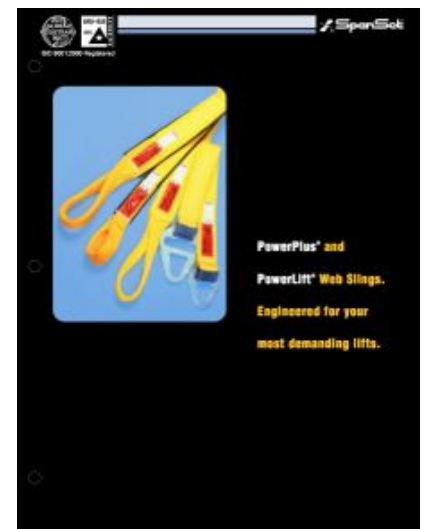

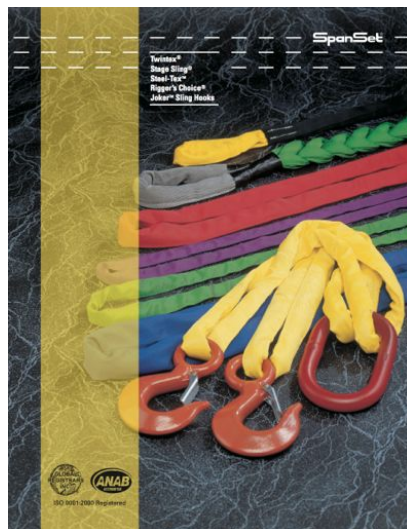

IMPORTANT!

Synthetic Web Tie Downs and Tow/Recovery Straps should be inspected by the person handling them each time they are used. Frequent visual inspection is your best safeguard. Contact SpanSet for further information on Inspection, Care and Use of Synthetic Web Tie Downs.

Fall Protection

Lifting

SpanSet has been an industry leader in lifting and cargo control products for over 30 years. SpanSet's quality control, with ISO 9001:2008 certified registration, and testing capabilities ensure that a quality product is produced with safety in mind.
